

The maximum recommended length of an entire DMX run is 1000'.
 Longer runs can be achieved using a DMX repeater.
 The maximum number of devices on a DMX network is 32.
 Install a DMX terminator at the end of the DMX run.
 Each Ilumipod 48 IP draws a maximum of 180W.

This fixture has a built-in user interface that allows the user to change the starting address, change the personality, or change the dimming curve.
 This fixture can be configured with a static or dynamic program which can operate in the absence of a DMX controller.
