

The maximum recommended length of an entire DMX run is 1000'.
 Longer runs can be achieved using a DMX repeater.
 The maximum number of devices on a DMX network is 32.
 Install a DMX terminator at the end of the DMX run.
 Each Ilumipod Inground Tri-12 IP draws a maximum of 40W.

This fixture requires the Ilumicode remote addresser to change the starting address, change the personality, change the dimming curve, or to set the fixture to operate on a static program.

This fixture can project a static scene in the absence of a DMX controller.
